

# Increase Efficiency & Streamline Operations

VectorCare’s cloud-based care delivery platform streamlines the management of service requests. Instantly schedule services, communicate with all members of the care team, and track the status of a request from end to end with fully credentialed service providers. No more phone calls, faxes, and wasted time.

## Increase Operational Efficiency

On average, it takes care team members 30 minutes to schedule each new service request. With VectorCare, scheduling a new request takes just 2-3 minutes. Ditch the phone & fax machine, and instantly message with all members of the care team to communicate about service requests. Improved patient movement means faster bed turnaround, less time on task, and more operational efficiency all-around.

## The Right Care, at the Right Time

Set medical necessity parameters for each service, ensuring that staff will only schedule services that are medically necessary for patients. Build patient workflows across unlimited service levels & types, then use rich data to improve workflows and increase value.

## Provider Management

Build healthy networks of local, fully credentialed service providers to perform auxiliary healthcare services. Leverage end-to-end transparency and performance metrics to ensure accountability.

“Saving 15 minutes per request translates to more reliable and timely patient services... this system helps us grow operations by providing more services in the same amount of time without increasing staff.”

–Care Technology Partner from California’s largest healthcare provider
