

# The Future of Patient Care Logistics

It's time to reimagine patient care logistics: healthcare is bogged down by inefficient processes, paperwork, human error, and a lack of transparency. Billing fraud remains common in healthcare, and it's difficult to provide value-based care without any clear provider performance metrics.

VectorCare is an innovative platform which enables realtime collaboration across all members of the care team. Our solution allows teams to manage end-to-end all services across the care continuum, while reducing cost and increasing operational growth. Build a marketplace of credentialed, accountable providers, and leverage data to improve patient care where it adds the most value.

## Easy Implementation

VectorCare is completely cloud-based, and requires no installation or updates. Our HIPAA-secure system ensures data protection.

## Increase Patient Satisfaction

Empower staff to spend less time performing menial administrative tasks, and more time providing high-value patient care. Increase bed turnaround times drastically by streamlining patient flow, helping patient spend less time waiting for care. Measure service provider performance through end-to-end transparency across a service request lifecycle.

## The Right Care, at the Right Time

Prevent medical errors & fraudulent billing through medical necessity guidelines. Verify that each patient receives the exact service they require, fulfilled by fully credentialed service providers.

“We took this onerous, homemade process that we were limping along with...to something that is sustainable and expandable into the future. It was a gamechanger for us.”
